Clackamas Community College is expanding its Energy and Utility Resource Management program to help meet the need for skilled utility workers.
The Wilsonville campus will offer two new pathway certificates beginning fall 2014 for Utility Field Technician and Occupational Health and Safety.

The campus also offers several on-site energy and resource management programs that are tailored to meet workforce needs: Energy and Resource Management, Utility Trades Preparation, Lineworker and Utility Workforce Readiness.

"A wave of utility workers across the nation is nearing retirement, and additional skilled workers will be needed to fill job openings," said college representative Shelly Tracy.

The certificates in Utility Field Technician and Occupational Health and Safety were developed in response to the needs of local businesses.

"Employers are looking for skilled utility workers to fill job openings. CCC is reacting to this workforce need by offering affordable education and training and adding new pathway certificates," Tracy said.
